

Asbestos Management

1.0 GENERAL

Asbestos, a known human carcinogen, can be found in over 3,000 building materials and products used in construction since the 1940's. Certain Asbestos-Containing Materials (ACM) are still manufactured for construction use in the United States. To minimize possible exposure to airborne asbestos fibers, ACM must be managed according to state and federal regulations.

2.0 REQUIREMENTS

Each component shall

- 2.1 Identify and document workplace hazards associated with ACM.
- 2.2 Develop, publish, and implement an asbestos management plan to reduce risk to faculty, staff, students, and visitors for identified ACM hazards.
- 2.3 Provide and document training to affected faculty, staff, students, and visitors in safe procedures for identified ACM hazards.

3.0 ASBESTOS MANAGEMENT PLAN

The written asbestos management plan shall describe procedures for compliance with regulations that apply to public buildings including, but not limited to

- 3.1 Texas Asbestos Health Protection Rules (25 TAC 295.31-73)
- 3.2 EPA National Emission Standards for Hazardous Air Pollutants (40 CFR Part 61, Subpart M)
- 3.3 EPA Asbestos Worker Protection (40 CFR Part 763, Subpart G)
- 3.4 Asbestos disposal (30 TAC 330.136)
