Effective Tuesday, November 8th, 2005, five new fields have been added to Screen 104. The TRS9 fields will be used to store the TRS amounts for new TRS members during their first ninety days of employment. After the 90-End-Dt date has been reached, the regular TRS amounts will be calculated and updated. TRS-Ret-Dt will be used to store the TRS retirement date for non A&M System retirees who are TRS retirees. Continue to use the retirement date on Screen 101 for A&M System retirees. These retirement dates will be used in the BP8048 (Area 1 / Area 2) reports.

Online help is now available for the TRS-Ded-Cd. Simply position the cursor in this field and press <F1> to get a pop-up list of the valid values and a brief descriptions of each value.

See the B/P/P System Manual for more information on Screen 104.

The payroll history tapes for fiscal year 2006 have been recreated to move the TRS deduction and covered earnings amounts from the TRS deduction to the TRS9 deduction where appropriate. This updated payroll history was then used to update the TRS/TRS9 deductions in the Personnel database (Screen 104) and the Payroll History database (Screen 502). A report was produced and printed at the workstation payroll offices detailing the changes made.

Please contact bpphelp@tamu.edu with questions or problems.
